### **REASONS FOR ALLOWANCE**

1. The following is an examiner's statement of reasons for allowance: Examiner has reviewed the Information Disclosure Statement submitted by the applicant and has found that the present application is allowable over the prior art for the reasons on record. It is noted that the changes set forth in the Examiner's Amendment mailed 23 November 2010 are unaffected by the mailing of this action and remain in force. A brief discussion of the newly cited references in relation to the claimed subject matter follows.

While Kompatsiaris et al. suggests extracting or detecting boundaries of a stent positioned within the body by using active contours or "snakes," which involves estimating the actual contours of the stent while positioned in the artery, Kompatsiaris et al. does not reasonably suggest or teach "calculating a field of motion vectors defining a motion of guidewire tip defined by a series of pixels along a center line, and registering the guidewire tip with respect to a previously acquired noisy image based on the field of motion vectors."

Further, while Baert et al. suggests that "centerline detection" of blood vessels to determine contours or shape of the vessels is known in the art; and uses a spline parameterization approach for tracking a guidewire wherein first, a rigid transformation (or rough estimate) of a guidewire displacement) is performed; wherein second, a spline is optimized; wherein third, "coherence-enhancing diffusion" (or nonlinear diffusion technique) by utilizing eigenvectors corresponding to flow-like textures is used to filter and reduce noise or blurring in the fluoroscopic image while maintaining line-like structures; wherein fourth, optimal spline position is determined by deriving a "feature image" by enhancing the line-like structures present in the image; wherein fifth, the feature image is combined or "pre-processed" with the original

Art Unit: 3777

image by using coherence enhancing diffusion (the aforementioned noise reduction technique) to fit the estimated contours onto the actual contours of the guidewire; and wherein sixth, further processing is performed to get an “exact” fit endpoint to endpoint of the guidewire; Baert et al. does not reasonably suggest or teach “calculating a field of motion vectors defining a motion of guidewire tip defined by a series of pixels along a center line, and registering the guidewire tip with respect to a previously acquired noisy image based on the field of motion vectors” to extract and track the position of the guidewire during endovascular intervention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

Any inquiry concerning this communication or earlier communications from the examiner should be directed to VANI GUPTA whose telephone number is (571)270-5042. The examiner can normally be reached on Monday - Thursday (8:30 am - 6:00 pm; EST).

If attempts to reach the examiner by telephone are unsuccessful, the examiner’s supervisor, Robert (Tse) Chen can be reached on 571-272-3672. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
